

MORE UPTIME. MORE PRODUCTIVITY.

Preventive maintenance is an investment in safety, efficiency, and productivity. That's why ROMCO PMI or Preventative Maintenance Inspections uses a 24 point check designed to spot issues before they become big problems.

Regularly performing multi-point machine inspections in conjunction with your planned preventative maintenance will benefit you in the following ways:

- Protects workers by helping ensure continuing safe operations
- Keeps machinery running at peak performance levels
- Minimizes fuel consumption and other power costs
- Maximizes efficiency, uptime and increasing profits in the long run
- Catches problems early, resulting in faster, easier, cheaper repairs and replacements
- Prevents small issues with components from affecting entire systems, again sparing you from costlier fixes and more downtime
- Helps keep projects on schedule
- Extends the life of heavy equipment significantly, reducing replacement costs

Call us Today!

Schedule one service for a single machine or long-term programs for an entire fleet. ROMCO's specially trained lube service technicians are ready to perform the service interval you need.

ROMCO PMI

- **Uses quality products that meet or exceed OEM specifications**
- **Performs factory recommended maintenance on any make or model**
- **Works on your schedule, at your facility or job site to increase uptime**
- **Frees up your on-staff mechanics and technicians for other projects**
